Course Outline

This package includes these courses

- Web Development with HTML & CSS (18 Hours)
- Photoshop for Web Design & UI (12 Hours)
- Advanced HTML & CSS (18 Hours)
- JavaScript for Front-End (18 Hours)
- Flexbox, Grid, & Bootstrap (12 Hours)
- WordPress Custom Themes (6 Hours)
- PHP & MySQL Bootcamp (18 Hours)
- Git Going: An Intro to Git (3 hours)
- Coding Tips & Tricks: Emmet, Sass, & Code Editors (3 hours)
- HTML Email Bootcamp (6 Hours)

Web Development with HTML & CSS

In this web development course, you'll learn how to develop websites with HTML and CSS, the languages used to create webpages.

Photoshop for Web Design & UI

In this course, you'll learn to use Photoshop to create and optimize graphics specifically for web and user interface design (without spending time on image retouching or color correction).

Advanced HTML & CSS

Kick your CSS skills up a notch and learn how to code more complex layouts. In this CSS course, you'll master the positioning of elements (relative, absolute, fixed), create multi-column layouts, and learn about newer CSS3 transitions, transformations, and animations.

JavaScript for Front-End

Give your websites a jolt of functionality and interactivity with JavaScript & jQuery. Learn to hide and show elements, customize animations, validate forms, and much more.

Flexbox, Grid, & Bootstrap

- CSS Flexbox for laying out and aligning webpage content.
- CSS Grid for an entirely new way to think about laying out entire webpages.
- Learn how to use Bootstrap (which is made with Flexbox) to build out layouts quickly.

WordPress Custom Themes

This intensive course will teach you how to do a custom install of WordPress, modify existing themes, develop your own custom themes and install plugins. This course is designed for people who are already familiar with HTML and CSS. Knowledge of PHP is a plus but is not required to take this class.

PHP & MySQL Bootcamp

PHP & MySQL unlock the dynamic power of the web allowing you to create pages that interact with customers, collect and display information from a database, send emails, and more. Gain a fundamental understanding of those two building blocks of dynamic websites.

Git Going: An Intro to Git

Git is the most commonly used version control system. Git helps you track the change you make to your code. Collaboration is seamless; Git allows multiple developers to work together on the same files. Your profile on GitHub can even serve as a portfolio of your work.

Coding Tips & Tricks: Emmet, Sass, & Code Editors

Coding doesn't have to take a long time. In this class, we'll help you shave hours off each project you create by using Emmet, Sass, and Sublime Text.

HTML Email Bootcamp

- Learn how to code HTML Email messages that are effective and cross-mail-client compatible.
- Build and work with multiple layouts (single or multi-column layouts).
- Gain a deeper understanding of email-friendly CSS and how to manage various email client issues.
- Create responsive emails that work across all devices
- Optimize images and swap content for mobile devices

- Use media queries to fine-tune mobile styles
